

Row Crop Bed Shapers

8421-R is specially designed to cultivate row crops on raised beds. Shaper pan sections fit between rows, providing gaps for crops to pass through. Shaper pan sections are available in 1-inch increments to match your bed and row system.

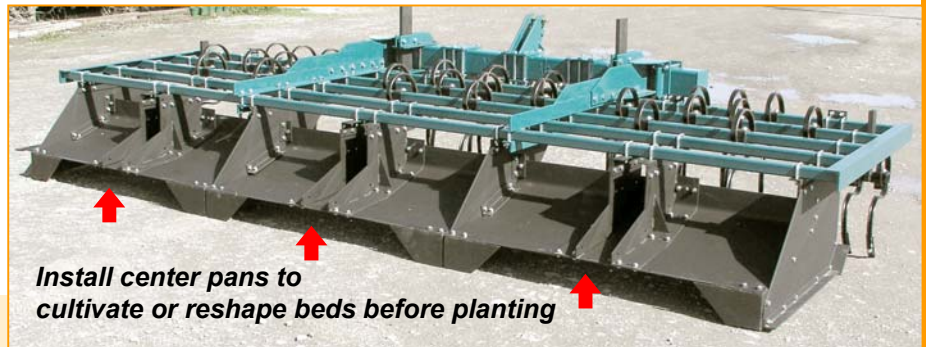

8421-R

Precision cultivation

Raised bed furrows provide a guidance system. Bed shapers align with furrows with precision equal to electronic systems. Then at a fraction of the cost, it's best. Be sure to plant accurately.

Rolling soil action in front of shaper pan buries starting weeds.

Install center pans to cultivate or reshape beds before planting

Inter-row pan and shield assembly. Center pan is available in 1-inch increments. Soil flow is adjustable under pan.

Reshaper brackets support pan sections near the row. The same reshaper brackets may be used to support weight of machine between wider-spaced rows.

S-tines are the primary means of tillage and typically used with row crop shields.

Other types of attachments can be used with unlimited possibility in the art of mechanical cultivation.
