

**Soil moisture control
and temperature control**

**Traffic control
and guidance system**

**Comprehensive surface
drainage solutions**

**Raised beds
FOUNDATION OF AGRICULTURE**

Bed Shapers work in loose prepared soil to form beds from scratch. The shaper pan fills and firms beds behind bed-filling attachments. Bed top width is exact with formed bed sides. Bed height is exact for consistent working depth with plastic mulch layers, planters, drip tape applicators and cultivators.

We offer raised bed solutions for small and large growers alike. Raising crops with consistent control of soil moisture and temperature is fundamental agriculture. A guidance system is ideal for mechanical cultivation of row crops.

Models for all growers

1721-D "Junior"	Category-1	for 25-35 PTO HP tractors
2121-D	Category-1	for 35-45 PTO HP tractors
4531-D	Category-2	for 45-80 PTO HP tractors

Multi-row Bed Shapers also available

Horsepower requirement

Nearly any tractor with a Category-1 3-point hitch can form a 4" bed height. Minimum 30-35 PTO-HP for 6" beds. 50 PTO-HP Category-2 tractor for 8" bed height.
