### Crop Shields

Row crop shields are used with S-tines at higher speeds. Adjust height to gap shield from the soil for more less soil spill into the row. These are built heavy to also contact the soil with the shield to better protect small plants. Bonus: Beet Knives and Tender Hoes can be mounted directly on the shields.

Series 595 Shields are long to conventionally protect crops across three toolbars. Series 591 Shields are short for more specialized set-ups, perhaps with a variety of attachments on a cultivator set-up.

#### 591 Series

Row Crop Shield Set, Short & Clamps

**20591** -- for 2" square toolbar

**25591** -- for 2-1/2" square toolbar

#### 595 Series

Row Crop Shield Set, Long & Clamps

**20595** -- for 3-bar x 2" square toolbar

**25595** -- for 3-bar x 2-1/2" sq toolbar
