

*Row crop cultivator with shaper pan*

Row Crop Bed Shapers feature gaps in the shaper pan for row crops to pass through. Like bed cultivators without a shaper pan, cultivation leaves raised beds intact.

- Maintain bed top width and shoulders to support crop rows
- Cultivate and reshape furrows
- The shaper pan perfectly follows the bed for precision cultivation
- Maintain bed shape for mechanical harvesters

Primary benefits come from simplicity of design. Rolling soil in front of the pan buries weeds. Easy to operate.

- The shaper pan also provides depth control off the top of the bed instead the furrow bottoms. Simple - with less adjustment
- Ideal to glide over-top buried drip tape lines
- Not recommended in heavy weed growth

Design is best-suited for one or two crop rows on each bed. Row spacing is changeable but dedicated use on one row system is practical.

- A third row is possible if row spacing is at least 15"
- Smaller fresh-market farms best benefit when using the same row spacing system across different crops
- Minimum 60" furrow spacing / tractor wheel spacing recommended
