

CLEAN PLASTIC REMOVAL

Removal of plastic mulch or drip tape can be fast and efficient with basic planning and management. We have a comprehensive line-up of progressive equipment for any grower that can no longer afford labor costs to do this job.

Most growers are familiar with Lifters to fracture soil and loosen mulch edges. We have the right features for simple operation, for the toughest field conditions and to leave a clean field without tearing plastic. Then Winders can be used to roll-up material into bundles one person can carry. Choose from several models to meet the system that works for you.

This plastic removal equipment can cost anywhere from \$100 to \$10,000, depending on how heavy of equipment you want and how much you need to mechanize. When practical, Lifter toolbars can be set-up to do other types of tillage work. Or, bed shaper or cultivator toolbars can quickly be set-up as Lifters. Expect a big bang for your buck.

**Four basic models
for 35 to 90 HP tractors**

For plastic mulch or drip tape

Expect a clean field

Multi-purpose toolbar

The strategy for plastic mulch is to split it down the middle then pull or wind-up each half by hand or by machine

**Solutions for small or large growers
are practical, adaptable, expandable**
