20288 Sub-Surface Guide

The popular choice to bury tape a few inches deep in loose soil.

Add a drip tape applicator to bed shapers and mulch layers to apply drip tape as beds are formed or mulch laid. This includes a simple support post and rotating spool shaft with a threaded spool nut. Add the Tape Guide for a complete applicator. No roll brake feature as speeds are typically slow on short rows.

16861 Tape Roll Caps

Ensure tape won't slip over end of new rolls.
