

use on plastic mulch

Mark rows / plant locations
Combine with bed shapers & mulch layers

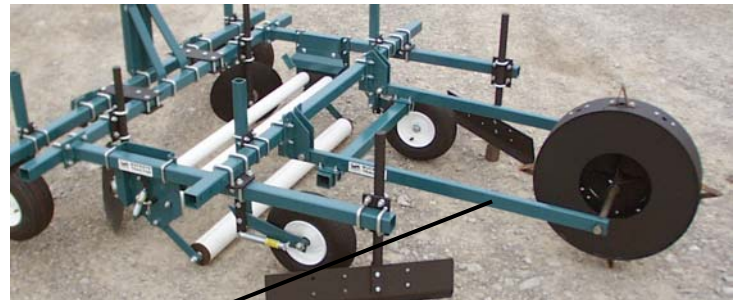

Punch plant holes through plastic or in bare soil. Mount behind other machinery or on it's own toolbar.

Like Water Wheels, "Dry Wheels" have various plant spacing patterns for bolt-on punches but feature a single panel since these do not carry water.

Standard frames for Mulch Layers feature maximum 24" row spacing. Wider frames can be customized to Mulch Layer.
