

Conventional seedbed cultivator equipped for raised beds

Rolling basket

Incorporate more residue

Prep seedbed for planting

Versatile toolbar frame

This is a basic tool for primary or permanent raised bed systems, featuring a rolling basket in place of a shaper pan. Pass more residue (light-to-moderate) and firm the bed top. Heavier residue or cover crop can first be mowed or disked, if needed.

As a conventional cultivator, break up crusty bed tops or control weeds, including light tillage of stale beds. S-tine working depth is adjustable. Tilling bed tops AND furrows, ripper shanks fracture furrow compaction and shaping disks restore bed shoulders.

Tillage on raised beds already in place has the same moisture control benefits - quicker, more consistent drying on top for timely tillage and better seedbed conditioning.

Tillage can be light or heavy, adjust as needed, one or two passes

Bed Harrows cut up heavier residue and keep beds intact

Bed shapers - featuring a flat shaper pan - are inherently limited in how much residue and weeds can funnel through the pan. Permanent bed systems and cover crop systems on beds typically need a design that allows more soil flow with residue

5500 Bed Reconditioners are all-in-one machines for moderate to heavy residue
