

Simplified field equipment for HOMESTEADS or HOBBY FARMS

**Transition from
hand work to basic
row-crop principles**

**For 15-25 HP
sub-compact tractors**

The Garden Series is a line of field equipment scaled for hobby farms or personal gardening. Such growers tend to have plots of less than one acre, may already have a small tractor for landscaping or homestead chores and may be realizing they are planting more than they can take care of by hand. Starting on the next page, we invite you to read the entire GARDEN EQUIPMENT PRIMER to review facts, ideas and product descriptions and how they work together to make the smallest tractor-mechanized farm effort work. It will answer some of your most basic questions.
